- Hard worker and self-starter
- Able to keep an eye on detail
- Self-motivated and organized

PROFESSIONAL EXPERIENCE

InEpt Software, Hawthorne, CA

Web Developer

Feb 2011 – Present

As a Web Developer, my main responsibilities include creating mockups from Photoshop and PDFs, hand coding all HTML and CSS (with and without using SASS), adding effects with JavaScript and jQuery, integrating outside APIs (when necessary), assuring websites are validated and cross browser compliant and generating graphics from design comps using Photoshop. I'm comfortable working with the Adobe Suite of CC products including: Photoshop and Illustrator. I'm also very comfortable working with AngularJS and React.

- Work directly with clientele to ascertain requirements and project goals
- Use AngularJS, Ruby on Rails to develop websites
- Build front-end of websites by creating necessary HTML and CSS
- Use SASS to facilitate CSS
- Assure websites are cross browser compatible
- Hand code all HTML and CSS
- Create behaviors and/or effects for websites using JavaScript and jQuery
- Integrate CDNs for page load optimizations
- Assure websites are W3C compliant
- Validate completed sites including debugging and testing of code
- Use Google Maps API to integrate client locations with maps
- Verify assets and estimate cost and time
- Responsible for generating graphic and media essentials using Photoshop
- Convert written and graphic components to compatible components
- Create mockups and convert mockups into HTML pages
